

Jayson Levin N. Tapia

Antipolo City, Rizal, Philippines | +63 921 480 5230 | levintaps@gmail.com | github.com/levintaps

PROFESSIONAL SUMMARY

Information Technology graduate and full-stack developer with hands-on experience designing and shipping complete web, mobile, and IoT-integrated applications - from REST API and database design to responsive front-end interfaces. Proficient in Java (Spring Boot), JavaScript/TypeScript, React, and cloud/serverless platforms (Firebase, Vercel), with additional experience in enterprise IT support, systems administration, and networking gained through a corporate internship. Seeking an entry-level Software Developer / Full-Stack Developer role that puts end-to-end project ownership and strong problem-solving skills to work.

TECHNICAL SKILLS

Languages & Frameworks: Java (Spring Boot), JavaScript, TypeScript, React, Python, C#, REST API Development

Web, Mobile & Game Development: HTML5, CSS3, Tailwind CSS, Vite, Progressive Web Apps, Flutter, Android Studio, Unity (C#)

Databases & Cloud Platforms: MySQL, Firebase (Firestore, Auth & Security Rules), Cloudinary, Serverless Architecture (Node.js, Vercel)

AI & Automation: Prompt Engineering, Google Gemini API Integration, AI-Powered Feature Development

Systems, Networking & Security: Linux, Windows, VMware Virtualization, Cisco Networking, Active Directory, Web Application Security

Testing, IoT & DevOps: Vitest, Firestore Rules Testing, Microcontrollers & Embedded Systems, Jenkins (CI/CD), Git/GitHub

UI/UX & Documentation: Figma, Wireframing, Process Diagramming, Technical Writing, MS Office Suite

PROFESSIONAL EXPERIENCE

IT Support Intern - Concentrix

August 2025 - November 2025

- Delivered technical support across a large-scale corporate IT environment, including OS installation, BIOS configuration, Group Policy setup, and workstation imaging/deployment for employee onboarding.
- Resolved help-desk tickets efficiently while installing and configuring required business applications and security tools on enterprise endpoints.
- Applied security patches and monitored endpoint compliance with company IT policies across managed workstations.
- Administered user accounts, permissions, and access rights through Active Directory, and diagnosed LAN/WAN connectivity issues for office workstations.
- Supported cable management and physical network setup, gaining hands-on exposure to enterprise network and hardware infrastructure.

SELECTED PROJECTS

Smart Parking System - Capstone Project | Jan 2025 - Dec 2025

Java (Spring Boot) | MySQL | REST API | Role-Based Access Control | IoT

- Led end-to-end development of an IoT-enabled smart parking platform with a web-based admin panel and a mobile-responsive client application.
- Built a real-time sales and revenue dashboard, live vehicle-entry tracking, and e-wallet balance management with role-based access for admin and staff.
- Engineered automatic fare computation based on live parking duration and configurable rate rules.

Illuminance Aesthetica - Salon & Spa Management Platform (Client Project) | Jul 2026 - Present

React 19 | Firebase (Firestore, Auth, Security Rules) | Tailwind CSS | Vite | Recharts

- Built a multi-role business platform for a salon and spa, with separate owner, manager, and staff workspaces governed by Firestore security rules and a role-aware routing layer.
- Delivered booking management, point-of-sale checkout, service catalog, client records, gift certificates, staff scheduling, and QR-based attendance tracking in a single application.
- Implemented an owner analytics suite - financial reports, payroll computation, and revenue trend charts - backed by real-time Firestore listeners.
- Wrote automated security-rule verification and database seeding scripts, plus a Firebase emulator workflow, so access control could be tested before every deployment.

Apartment Management System (Client Project) | Aug 2026

React 19 | TypeScript | Firebase (Firestore, Auth) | Vercel Serverless | Cloudinary | Vitest | PWA

- Built a fully typed rental-property management system covering unit occupancy, tenant payments, expense tracking, and owner reporting for a multi-building rental portfolio.
- Designed a strict two-role model (owner and viewer) enforced entirely in Firestore security rules - no client-writable role documents - and covered it with an automated rules test suite run against the emulator.
- Added signed Cloudinary uploads through Vercel serverless functions for receipt attachments, plus PDF statement generation and installable offline-capable PWA support.

RecordLog - Document Tracking System (Client Project) | Jun 2026

React | Firebase (Firestore, Auth) | Recharts | Vite | PWA

- Built an internal document-tracking system for logging incoming and outgoing records, replacing a manual paper-and-spreadsheet workflow.
- Implemented file attachments with an in-app viewer, autocomplete-assisted data entry, an audit log of every record change, and an internal messaging module between staff accounts.
- Added a dashboard with volume and trend charts, one-click print and export, offline support with network-status awareness, and light/dark theming.
- Shipped and iterated the system through multiple production releases based on direct user feedback.

OJT Attendance Management System - Personal Project | Sep 2025 - Nov 2025

Java (Spring Boot) | MySQL | REST API | Role-Based Access Control

- Identified a manual attendance-tracking gap during the Concentrix internship and independently built a full-stack replacement now used by real interns and IT staff.
- Developed an intern-facing portal for badge-based time-in/time-out and account registration, plus an AI chatbot that answers FAQs on scheduling and badge issues.
- Built an admin dashboard with real-time attendance statistics and trend charts, with role-based access separating admin and intern permissions.

Additional projects (live demos): **Vanima Atelier**, a Firebase PWA for a printing business covering orders, inventory and sales analytics - vanima-atelier.vercel.app; **Lookwhatchera**, a Spring Boot tourist guide with an AI chatbot and Google Maps pinning - levi-lookwhatchera.vercel.app; **Harana Hub**, an AI karaoke platform scoring vocals with Google Gemini on a Vercel serverless API - harana-hub.vercel.app. A Java POS desktop system, two Unity/C# Android games, an AI text-humanizer, a cybersecurity services site, and a self-hosted Telegram AI assistant are documented at github.com/levintaps.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Information Technology - ICCT Colleges Foundation, Inc. Jan 2022 - Dec 2025

Java Programming NC III - TESDA Manila

ACHIEVEMENTS

- Multiple-time Champion, Competitive Chess Tournaments
- UAAP Multiple Award Recipient
- FIDE Rated - Ranked No. 43 in the Philippines (October 2020)
